Rice Production
Teaching Guidelines

## Subject: Mathematics

Topics: Algebra-Coordinate Systems; Linear Equations and Functions
Grades: 6-12

## Knowledge and Skills:

- Can plot a point in a two-dimensional coordinate system, given the coordinates, or determine the coordinates of a given point
- Can extrapolate a graph when a pattern exists
- Can use a functional relationship to predict the value of one variable when the other is known
- Can determine the equation of a linear function that closely matches a set of points
- Can solve a one-variable linear equation

## Materials: None

Procedure: This activity is best done by students individually or in teams of two.
When they graph the data, they will need to determine what the variables are (year, amount of rice produced), and which is independent (year) and which is dependent (rice)

The line above represents a good fit to the given data in the domain of 1959 to 1999；its equation is：

$$
y=3670 x-7,130,810
$$

Solving this equation for $x=2004$ gives 223,870 hundreds of pounds of rice．
Solving for $x=2005$ gives 242,200 hundreds of pounds of rice．
Solving for $y=250,000$ gives the year 2011.

# Rice Production <br> Investigation 

The table belowshows how much rice has produced in the United States, every $5^{\text {th }}$ year for the past 100 years.

| Year | Hundreds of pounds of <br> rice produced |
| :---: | :---: |
| 1899 | 4,029 |
| 1904 | 8,647 |
| 1909 | 10,614 |
| 1914 | 10,565 |
| 1919 | 19,310 |
| 1924 | 14,689 |
| 1929 | 17,5901 |
| 1934 | 24,328 |
| 1939 | 40,7694 |
| 1944 | 53,647 |
| 1949 | 64,193 |
| 1959 | 73,166 |
| 1954 | 91,904 |
| 1964 | 112,386 |
| 1969 | 131,947 |
| 1974 | 138,810 |
| 1979 | 154,487 |
| 1984 | 197,779 |
| 1989 | 210,458 |
| 1994 |  |
| 1999 |  |
|  |  |

Can you use this data to predict fowmuch rice might be produced in the years 2004 and 2009? Can you predict in what year rice production will reach 250,000?

$\left.C \int J=\right\rfloor \int J \backsim$
$\mathcal{H e r e}$ is one approach:

1. Grapf the above data.
2. See if there is a pattern to the data. Extend the pattern to estimate the number of pounds of rice that would be produced in the year 2004.
___-__-_-_ fundreds of pounds
3. Extend the patternfurther to estimate the number of pounds of rice that would be produced in the year 2009.
-_-----_- hundreds of pounds
4. Extend the patternfurther to find the year for which the amount of rice produced is 250,000 .

If youknowenough alge bra, you can find a more exact answer by using equations, as follows:

1. Lookat the data on the graph from 1959 to 1999. These points ne arly all line up on a straight line.
2. Drawin a line that comes closest to the data points, and find its equation.
3. Use that equation to predict the production of rice in 2004 and 2009.

2004: $\qquad$

2009: $\qquad$
4. Ulse that equation to find in which year you would expect rice production to Ge 250,000 fundreds of pounds.
